Toy transformations, held-out replicate (5 seeds, mean ± sd)
energy distance (log scale)
10^{0}
10^{-1}
10^{-2}
10^{-3}
translation
best control:
mean shift (0.0012)
variance change
best control:
linear map (0.0007)
bimodal split
best control:
velocity replay (-0.0002)
condition-dependent shift
best control:
mean shift (-0.0002)
flow model
permutation threshold (95%)
best control
flow model, shuffled time
